

The Plot is Like the Universal Law of Gravity

The year was 1687. As legend has it, Sir Isaac Newton was sitting under an apple tree in his orchard wondering about the forces that kept the moon in orbit. Just at that moment, an apple fell and hit him on his head, and then continued to roll to the ground. This triggered Newton's great "ah-ha": the force that caused the apple to fall could be the same force that keeps the moon in motion around the earth. Newton's Third Law pretty much tells us that the force of gravity is proportional to the size of the masses involved and the distance between them. According to Newton, the gravitational force, which acts between two masses, acts on a straight line and in the case of spheres, acts along the line between the two centers. Because Newton's law affects all objects in the universe, it is therefore known as the Universal Law of Gravitation.

Newton's discovery opened up the door for all sorts of scientific inquiry. It helped us understand that the gravitational force between the planets and the sun pulls the planets in an elliptical orbit around the sun, in the same way that the earth's moon and moons of other planets are held in orbit by the gravitational force between them.

The Law of Universal Gravitation was always with us. Newton was simply the first person to give it definition. The fact that he was able to define it using such a basic formula added to its utility.

Much in the same way, the discovery of and defining of "*The Plot*" is akin to the Universal Law of Relationships. While the forces of emotion have always been with us, *The Plot* provides us with a reference that is universal in application and accurate 100% of the time. As with Sir Isaac Newton's discovery, we can expect that *The Plot* will open up new vistas of thought and help lead us out of the traps we encounter whether at work, home, school, or on a national or international level. *The Plot* has the potential to free up enormous amounts of negative energy wasted on unnecessary drama. Energy that could be utilized towards improving relationships at home, work, school and across the entire planet.
